## Clippard Releases New 10 & 15 mm Miniature Electronic Valves Brochure

Cincinnati, Ohio -- Clippard, a manufacturer of Precision Flow Control products with focus in the medical, analytical, liquid/gas delivery, laboratory and industrial automation markets, announces the release of new literature highlighting the 10 and 15 mm valve series.

These small electronic valves utilize reliable plunger valve technology. The most common poppet technology in the valve marketplace, this proven design is ideal for less demanding applications. Plunger-style solenoid valves can offer a great value, providing fast response times and relatively long life at a great price. These designs are commonly utilized in applications where mounting multiple valves on a manifold together reduce the number of fittings, overall package size and total cost.

- 2-Way & 3-Way Normally-Open or Normally-Closed functions
- Multiple voltages, connection styles & sizes
- Standard, High Flow & Latching models
- Customization available
- CE & RoHS Compliant

For more information on the 10 and 15 mm valve line or any of Clippard's other 6,000 standard flow control products visit [clippard.com](http://clippard.com) or call 877-245-6247.
